

With the support of CBM

we hope we can increase the awareness

we can strengthen the primary health providers

and also the referral system

so that

avoidable blindness in Malawi can be reduced

My name is Hytone Kadyamo. I am the administrator for the Nkhoma eye project

As a hospital we face a lot of challenges but key is a lack of awareness especially in poorer communities.

The consequence of the lack of awareness in the communities is that people remain blind

and if they're blind, they cannot do things on their own.

They cannot perform well in their activities.
